## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1, 5-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Khalat (EP 0948128 A1) in view of Ratto (US PAT: 6,993,091, filed 9-26-2001).

Regarding claim 1, Khalat discloses a direct conversion receiver for substantially removing DC offset signals in a mobile communication terminal, the receiver comprising: converting means (30/50, fig.1) for down converting a modulated signal received from an antenna (7, fig. 1), detecting means (210, figs.1-2) for detecting a difference between two DC offset signal components, and adjusting means in (220/230, fig. 1) for substantially reducing the difference (col. 1, line 45 – col. 4, line 58).

Regarding claim 5, Khalat discloses a method for substantially removing DC offset signals utilizing a direct-conversion receiver, the method comprising the steps of: down converting a modulated signal receiver from an antenna (7, fig. 1), detecting a difference between the DC offset signal components from balanced mixers (30/50, fig. 1) and adjusting the difference between detected DC offset signals components to minimize the difference (col. 1, line 45 – col. 4, line 58).

Khalat differs from claims 1 and 5 in that he does not specifically teach: determining whether DC offset is zero and outputting a control voltage to adjust DC-offset to zero.

Art Unit: 2614

However, Ratto discloses correction of DC-OFFSET of I/Q modulator which teaches the following: determining whether DC offset is zero and outputting a control voltage to adjust DC-offset to zero (figs. 1-2, see abstract; col. 3 lines 10-31).

Thus, it would have been obvious to one of ordinary skill in the art at the time invention was made to modify Khalat's system to provide for the following: determining whether DC offset is zero and outputting a control voltage to adjust DC-offset to zero as this arrangement would provide another method to adjust DC-offset to zero by using feedback signals as taught by Ratto.

Regarding claim 6-7, Khalat further teaches the following: outputting a value to minimize the difference, mixing a signal provided by low noise amplifier (20, fig. 1) with two I/Q components generated in local oscillator (70, fig. 1), respectively, converting the mixed signal into a base band signal, and amplifying (by 120/170, fig. 1) the base band signal based upon a value generated by an adjustment means of the direct conversion receiver (col. 1, line 45 – col. 4, line 58).

3. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Khalat in view of Ratto as applied to claim 1 above, and further in view of Kataoka et al. (JP410247953A, hereinafter Kataoka).

Regarding claim 2, the combination teaches the following: at least one mixer (30, fig. 1 of '128) for mixing the signal provided from a low amplifier (20, fig. 1 of '128) with two I/Q components, at least one low pass filter (110/160, fig. 1 of '128) for eliminating spurious signals generated in the mixers, and at least one compensation amplifier (in

Art Unit: 2614

200, fig. 2 of '128) for compensating the DC offset signal, wherein the first amplifier has a fixed gain (col. 1, line 45 – col. 4, line 58 of '128).

The combination differs from claim 2 in that he does not teach the following: I and Q components that are separated by 180 degree in phase and second amplifier has a variable gain.

However, Adachi teaches the following: I and Q components that are separated by 180 degree in phase (fig. 2, paragraph: 40-42); Kataoka discloses receiver which teaches the following: amplifier (8, fig. 1) has a variable gain.

Thus, it would have been obvious to one of ordinary skill in the art at the time invention was made to modify the combination to provide for the following: I and Q components that are separated by 180 degree in phase as this arrangement as this arrangement would provide one of the methods, among many possible methods to generate I and Q components as taught by Adachi; second amplifier has a variable gain as this arrangement would provide means for fine tuning DC offset cancellation in the receiver as taught by Kataoka.

4. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Khalat in view of Ratto as applied to claim 1 above, and further in view of Mitama (EP 0863606A1).

The combination differs from claim 4 in that he does not teach the following: a switching means for connecting the converting means to detecting means.

Art Unit: 2614

However, Mitama discloses direct conversion receiver capable of canceling DC offset voltages which teaches the following: a switching means (20) for connecting the converting means to detecting means (fig. 1, see abstract).

Thus, it would have been obvious to one of ordinary skill in the art at the time invention was made to modify the combination to provide for the following: a switching means for connecting the converting means to detecting means as this arrangement would provide alternative method for implementing DC offset cancellation in a receiver as taught by Mitama.

5. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

## Response to Arguments

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 2614

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Melur Ramakrishnaiah whose telephone number is (571)272-8098. The examiner can normally be reached on 9 Hr schedule.
